The Nursery For Particular People

Wild Flower Gardening...

Everyone who is interested in the preservation of the rare and beautiful native plants should make an earnest effort to establish specimens in pleasant and protected locations.

In wildflower gardening the safest plan is to imitate nature, both as to location and arrangement; otherwise the results will be inharmonious and unsatisfactory.

There are many shady corners on home grounds, where the soil is damp and rich, and every one of them can be made a beauty spot by planting ferns and native wildflowers.

Plan to make your selections from this catalog of nursery-grown material, which is more likely to thrive than that collected from the woods and fields.

Conserve, Protect, and Enjoy, . . .
